## DETAILED ACTION

### *Claim Rejections - 35 USC § 103*

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

The factual inquiries set forth in *Graham v. John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

1. Determining the scope and contents of the prior art.
2. Ascertaining the differences between the prior art and the claims at issue.
3. Resolving the level of ordinary skill in the pertinent art.
4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

Claims 1-5, 8, 9, 10, 11, 12, 13 and 15-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Larsen et al (US Patent 5,948,000) in view of Nicholson et al (US Patent 5,911,721). The patent to Larsen et al teaches a two part suture anchor having a pin with a traverse bore and a sleeve wherein the pin is adapted to be inserted into the sleeve as recited in claim 1. However, Larsen et al is lacking a teaching of a threaded outer surface of the sleeve. A threaded outer sleeve for this type fastener is known in the art. Nicholson et al teaches that threading on the outer surface of the sleeve is an alternative to ridges on the outer surface (col. 7, lines 42-66). Therefore it would have been obvious to one having ordinary skill in the art to provide Larsen with a threaded outer sleeve to minimize the size of the predrilled hole in the bone.

Art Unit: 3731

Concerning claim 4, Larsen suggests that the pin can have non-circular cross-section to prevent rotation of the shaft. (col. 4, lines 49-53). The particular hexagonal cross-section would have been an obvious design choice.

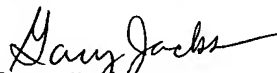

***Allowable Subject Matter***

Claims 6-7 and 14 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
